

PROJECT OVERVIEW

Persist is a mobile productivity app designed to help users convert long-term goals into daily execution. The app combines structured goal planning, task sessions, mood logging, progress insights, friend accountability, and API-based AI-assisted planning in one focused workflow.

Project Type	Final-year / portfolio mobile app prototype
Primary Stack	React Native, Expo, JavaScript, Firebase Auth, Firestore, Firebase Storage
Additional Version	Flutter version built with similar core goal-tracking flow
AI Component	LLM API used for AI-assisted goal planning and daily task generation
Data Layer	Firebase Auth + Firestore-backed user data and progress storage
My Role	End-to-end app flow, UI screens, Firebase integration, AI planning flow, progress logic, and project documentation

CORE FEATURES

Goal & Task Planning - Goal creation flow - API-based AI-assisted daily plans - 3-5 daily tasks with task-session flow	Progress & Stability - Skip-risk probability indicator - Stability score - Insights and report screens
Mood & Reflection - Daily mood logging - Post-task mood feedback - Reflection flow for goal progress	Social & App System - Friend progress / accountability - Firebase Auth and Firestore storage - Notifications and settings flow

AI & SCORING NOTE

Persist uses API-based AI assistance for goal planning and daily task suggestions. Skip-risk probability and stability score are app-level behavioral indicators based on progress, mood, and completion patterns; they are not medical, clinical, or psychological diagnosis tools.

FINAL SUMMARY

React Native / Flutter mobile app with Firebase Auth, Firestore, API-based AI-assisted goal planning, daily task generation, skip-risk probability, stability score, mood logging, insights, reflection flow, and friend progress features.
